

INTERNATIONAL NEWS

14TH ISSUE - NOVEMBER 2017

Last summer Ingerop and Rendel were awarded in association with Jacobs the engineering services of HS2 lot C1 to be built by ALIGN JV, a consortium of contractors led by Bouygues. The first phase of the UK high-speed rail is the extension of the network between London to Birmingham. Our integrated team is now fully operational in London.

This issue of the International Newsletter will focus on our major international projects currently undergoing in the infrastructure activity, ie HS2, the Bar-Boljare project in Montenegro, Padma Bridge in Bangladesh and the access road to Tema Port in Ghana. Such demanding projects in direct partnership with the contractors or the owners generate constant challenges for our teams of engineers, which we are proud to present hereafter.

Christophe Blanc, International Director

FOCUS

HIGH SPEED TWO (HS2) EARLY CONTRACT INVOLVEMENT (ECI) PHASE ONE, LOT C1

HS2 Phase 1 is the expansion of the UK high-speed rail network between London, Euston Station and Birmingham, West Midlands. The ALIGN JV (a JV of Bouygues TP, VolkerFitzpatrick and Sir Robert McAlpine) was awarded the £965 million Chiltern Tunnels and Colne Valley Viaduct main civils contract (Lot C1), a key section of Phase 1.

FIRST SPAN ON 6.15KM LONG ROAD AND RAIL PADMA BRIDGE IS INSTALLED

A very visible milestone was reached on the Padma Bridge project in Bangladesh this week, when the first of the 41 spans was successfully installed on piers 37 and 38. The installation of the 150-metre long span (superstructure) took just two hours to be installed on the morning of 30 September 2017 and was witnessed by local dignitaries including Road Transport and Bridges Minister, Obaidul Quader.
