

## **Axfer, a new subsidiary of the Ingérop group, offers its expertise in technical assistance in the railway sector**

Nice-Breil railway line ©Ingérop

**Rueil-Malmaison, 16 September 2025** – The [Ingérop](#) Group is strengthening its position in railway engineering and technical assistance with the creation of Axfer, a subsidiary dedicated to this sector. With its team of experienced consultants, Axfer supports major players in the sector, including SNCF and RATP, and is continuing to grow to meet the increasing needs of this market throughout France.

### **Keeping pace with the railway industry**

The railway sector has been experiencing strong growth in recent years, as confirmed by the Transport Regulatory Authority in a recently published [report](#). This growth is accompanied by an increased need for technical and engineering expertise in the fields of electrical engineering, civil engineering and, more generally, railway project management. Axfer was born out of this need, a dedicated engineering company that draws on the group's recognised expertise to support its long-standing clients and the major players in this industry – SNCF Réseau, SNCF Gares & Connexions and RATP – in their strategic projects. With several framework agreements dedicated to these activities, the Ingérop group confirms the relevance of this positioning.

### **Tailor-made support**

Axfer's value proposition lies in its ability to deploy specialised teams directly within our partners' railway organisations, while drawing on Ingérop's expertise. This dual approach enables us to offer localised, flexible support tailored to the realities of each project.

Axfer's scope of work covers the entire field of railway engineering and technical assistance: technical studies and production engineering in civil and electrical engineering, project assistance and management, and management and coordination during both the design and construction phases.

## **An already operational and growing team**

Axfer is growing rapidly and is looking for new talent to expand its field of activity and support its clients throughout the entire value chain of railway projects throughout France.

Florian Aubertin, Director of Ingérop's Transport Division in France, and Sébastien Jourdain, Chief Operating Officer of Axfer, explain: *"With the creation of Axfer, we are taking a new step forward in supporting our railway clients as closely as possible to their needs. This subsidiary allows us to combine technical expertise and operational proximity by mobilising dedicated and specialised teams capable of intervening in both the design and construction phases. In a rapidly growing sector, Axfer embodies the Ingérop group's desire to put all its expertise and vision of sustainable and local engineering at the service of our partners' structural projects."*
