Rueil-Malmaison, 25 June 2026 – Ingerop, an engineering and consultancy group committed to supporting ecological, energy, industrial and societal transitions, is continuing its expansion with the acquisition of the Pierre Chuard Group, a major player in engineering within the construction and industrial sectors in French-speaking Switzerland.

This transaction is fully in line with the group's growth strategy, which aims to strengthen its regional presence both in France and internationally, whilst developing its expertise across the entire engineering value chain. In Switzerland, following the acquisition of Geos in 2005 and SGI Suisse in 2023 (which became Helveos in 2025), Ingerop is taking a new step forward in its development and now has a workforce of nearly one hundred employees in the country.

The Pierre Chuard Group: an expert in technical installations and energy efficiency in buildings in French-speaking Switzerland

Based in Lausanne and Geneva, the Pierre Chuard Group comprises nearly 50 staff across three complementary entities:

- Chuard Ingénieurs – Heating and ventilation systems,
- Fluides Concepts – Sanitary and industrial systems,
- Sorane – Building energy performance.

The Pierre Chuard Group is involved throughout the entire project lifecycle, from design studies through to site supervision and operational audits on large-scale projects. In 2025, the group achieved a turnover of 6.5 million Swiss francs.

Its areas of expertise include, in particular, heating, ventilation, air conditioning and plumbing; complex thermal and energy systems; energy-efficient building design; advanced thermodynamic simulations; building physics; renewable energy; geothermal energy; certification schemes (Minergie, DGNB, SNBS); the design of neighbourhood energy supply systems; and advanced building envelope design.

The group also possesses recognised expertise in high value-added technical installations, particularly in the hospital sector (operating theatres, clean rooms, laboratories) and in infrastructure requiring high energy performance or complex fluid management.

Since its foundation, the Pierre Chuard Group has contributed to several major projects in French-speaking Switzerland, including the Rolex Learning Centre, the Hôtel Métropole in Geneva, the Audemars Piguet Hôtel des Horlogers, Geneva International Airport, the Tulipe building in Geneva, the new Comédie de Genève, the Innovation Quarter at the Swiss Federal Institute of Technology in Lausanne, Morges Hospital, the Spark industrial building and the Foundation for Public Research in Geneva. The company thus supports a wide range of public and private clients across the commercial, residential, industrial, hospital and hospitality sectors.

Synergies based on shared values and strong complementarities

It was following their collaboration on Geneva International Airport that the Ingerop Group and the Pierre Chuard Group realised just how well they complemented one another.

Both companies share the same vision of engineering, based on close client relationships, technical excellence, innovation and a commitment to sustainable solutions.

This convergence of values and expertise provides a solid foundation for developing new synergies and offering an even more comprehensive range of services to public and private clients.

In particular, the complementary expertise of the two entities opens up new development opportunities in growth markets such as data centres, industrial and hospital infrastructure, as well as laboratories and buildings with high environmental performance.

“This acquisition marks a new stage in our development in Switzerland, a strategic country for Ingerop. The teams at Groupe Pierre Chuard possess recognised expertise in heating, ventilation and air-conditioning systems, as well as in energy performance. Beyond our technical skills, we share the same vision of our profession, based on a close working relationship with clients, technical excellence and a commitment to sustainable projects. Together, we will be able to support our clients across an even broader range of projects and continue our growth in French-speaking Switzerland,” said Yves Metz, Chairman of the Ingerop Group.

About Ingerop

Based in Rueil-Malmaison, Ingerop is an engineering and consultancy group working on key challenges to build, today, the world of tomorrow: sustainable mobility, the energy transition and the living environment. The group has built a solid reputation across all sectors of the construction industry: building, water, energy, industry, infrastructure & mobility, transport and urban development. Its experienced teams offer specialist technical support, covering all phases of projects and construction sites. A leading player in France, Ingerop has a strong and constantly growing international presence. The group is continuing its steady growth, drawing on its shareholder independence, technical expertise, capacity for innovation and close relationship with its clients.
