

# Ingerop strengthens its position in Germany with the acquisition of Bollinger + Fehlig Architekten

*With this sixth acquisition in Germany, Ingerop strengthens its value chain in Germany by  
complementing its offer with architectural skills*

**Rueil Malmaison, June 4<sup>th</sup> 2026** – Ingerop, a leading engineering firm committed to environmental, energy, industrial and societal transitions, announces the acquisition of Bollinger + Fehlig Architekten, a German architectural firm. This transaction strengthens Ingerop’s local presence in Germany whilst expanding its areas of expertise to serve its public and private sector clients.

## **Bollinger + Fehlig Architekten: German precision and restraint**

Founded in Berlin in 2000, Bollinger + Fehlig Architekten develops a wide range of urban construction projects and designs or refurbishes residential properties, offices, laboratories, hotels and educational buildings. Its innovative and unconventional proposals address the operational challenges of construction sites whilst ensuring that clients’ deadlines and budgets are met.

Building on its experience in the construction and industrial sectors in Germany, Ingerop sought to expand its offering by incorporating expertise in functional building architecture: Bollinger + Fehlig Architekten emerged as the obvious choice.

### **Complementary expertise working towards a shared vision**

This partnership is based on a shared vision of engineering and architecture: an integrated, rigorous and responsible approach.

The teams at Ingerop Deutschland and Bollinger + Fehlig Architekten will pool their expertise to design and deliver projects that address today's challenges:

- technical performance,
- optimisation and control of costs and deadlines,
- resource efficiency,
- integration of circular economy principles.

The integration of Bollinger + Fehlig Architekten's architectural expertise thus complements Ingerop's service offering, in line with its ambition to provide comprehensive solutions to its clients. Initial commercial collaborations are already underway.

### **Confirmed growth momentum in Germany**

Germany is now Ingerop's second-largest market. With six local acquisitions since the end of 2018, Ingerop Deutschland is set to generate turnover of €60 million in 2026 and will exceed 500 employees this year.

Already well established in southern and western Germany, Ingerop Deutschland is expanding its presence across the whole of Germany, benefiting from the local dynamism of Bollinger + Fehlig Architekten both in Berlin and in the north of the country.

Finally, this transaction strengthens the group's ability to support its French and international clients with their projects in Germany, a key market for industrial investment and the infrastructure sector.

*"The merger of Ingerop and BFA strategically combines architectural planning expertise and engineering know-how. Together, we expand our professional network and establish a strong foundation for interdisciplinary projects, sustainable growth, and long-term opportunities for clients, employees, and future developments.*

*We look forward to continuing this shared journey as part of the corporate group and actively shaping the collaboration. We see this union as a valuable opportunity to address the future challenges of the industry with fresh impetus and combined experience."* Jens Fehlig and Roger Bollinger, Founders and Managing Partners, Bollinger + Fehlig Architekten

Yves Metz, Chairman of the Ingerop Group, and Thomas Sontag, Managing Director of Ingerop Deutschland, conclude: "We are delighted that the teams at Bollinger + Fehlig Architekten are joining us. This acquisition marks a new stage in Ingerop's development in Germany. It demonstrates our commitment to strengthening our local presence in the long term whilst enriching our range of expertise across the engineering and architecture value chain. Beyond expertise, this merger is based

above all on a shared human connection and a shared vision of our profession: high-quality, responsible engineering and architecture that serves local communities.”
